[Hiring Manager Name]

[Company]

Dear [Mr./Ms. Last Name / Hiring Team] ,

I am applying for the [Role Title] position. I am a full-stack developer and B.S. Computer Science / Cybersecurity Engineering student (3.9 GPA, Dean's List every quarter) with production experience across client websites, e-commerce platforms, APIs, and edge infrastructure — and I would welcome the chance to bring that mix of shipping experience and security mindset to [Company] .

In my freelance practice I own production systems end to end: a Next.js healthcare marketing site with Stripe shop, booking APIs, and admin tooling (myhairloss.com); a multi-tenant wholesale e-commerce platform with ~100+ SKU categories and full checkout (United Distribution); and a Cloudflare worker fleet — queues, D1, R2, Turnstile-gated booking — that powers my own portfolio at pwn4g3.pages.dev. Every project linked there is live, so my work can be evaluated directly rather than taken on faith.

What draws me to [Company] is [one or two sentences: their product, stack, mission, or local St. Louis presence — show you did the homework] . My background maps to it directly: [one sentence tying your need — e.g. storefront work, API development, IT support, security hygiene — to a specific project above] .

I reply to every inquiry within 24 hours and would welcome a conversation at your convenience. Thank you for your time and consideration.

Sincerely,

Jacob Michael Viefhaus
