Jake M. Viefhaus

IT Support & Networking — Computer Science Student
Florissant, MO | (314) 900-9520 | geekhaus314@proton.me
github.com/geekhaus314 | pwn4g3.pages.dev

SUMMARY

IT support and networking-focused Computer Science student, available on-site in the St. Louis area. Comfortable across Windows, Linux, and macOS, with hands-on networking fundamentals, DNS and domain administration, and production infrastructure I run end-to-end. Pursuing a B.S. in Computer Science (Cybersecurity Engineering Concentration) and looking for an employer willing to invest in a long-term hire.

CORE COMPETENCIES

Systems	Windows 10/11, Ubuntu/Debian, macOS, Windows Subsystem for Linux, Kali Linux, hardware troubleshooting, peripheral and driver issues, disk imaging, Android/ADB
Networking	TCP/IP, DNS, routing and switching concepts, LAN/WAN, Wi-Fi configuration and troubleshooting, port and protocol analysis, DHCP
Cloud & Hosting	Cloudflare Pages/Workers/DNS/Wrangler, domain and registrar management, R2 object storage, D1 databases
Security	OWASP Top 10, Nmap, Burp Suite, nuclei, vulnerability research, access and credential hygiene, CSP reporting
Scripting	Python, Bash, PowerShell, JavaScript/TypeScript, Java, SQL
Tooling	Git/GitHub, GitHub Actions (CI/CD), Docker, Linux CLI, uptime and health monitoring, issue tracking

EDUCATION

B.S. Computer Science, Cybersecurity Engineering Concentration — Incoming, Spring 2027
Webster University

Transferring from CTU; expected graduation 2029.

B.S. Computer Science / Cybersecurity Engineering — Enrolled December 2025
Colorado Technical University

Dean's List. Coursework: Fundamentals of Networking, Fundamentals of Programming, Introduction to Programming (Python), Introduction to Computer Security, Information Security Fundamentals.

EXPERIENCE

Freelance IT, Web & Infrastructure Support — 2026 – Present
Independent

- Own production infrastructure end-to-end for client sites — domain and DNS administration, hosting configuration, deployment, and uptime monitoring.
- Build and operate a 16-service Cloudflare Workers backend with a relational D1 database, deployed through automated GitHub Actions pipelines.
- Diagnose and resolve production issues including DNS misconfiguration, cache and header behavior, and performance regressions.
- Handle client communication directly: scoping requests, reporting status, documenting work, and managing security reviews.

Security Research — 2026
Independent

- Conducted authorized vulnerability research against Dropbox, Azure DevOps, and other in-scope targets; operated a Kali Linux reconnaissance and testing lab.

E-Commerce Infrastructure Developer — 2026
United Distribution, Florissant, MO

- Built multi-tenant B2B/B2C e-commerce infrastructure for a wholesale distributor covering 100+ SKU categories, payment processing, and deployment pipeline, working directly with the owner.

PROJECTS

pwn4g3 Platform — pwn4g3.pages.dev
Cloudflare Workers · D1 · CI/CD

- Operate 16 deployed Cloudflare Workers (payments, booking, admin, audit, scheduler, health monitoring, guestbook, Reddit and Discord integrations) sharing rate-limiting, CORS, and audit-logging middleware.
- Administer an 11-migration D1 schema covering telemetry with daily rollups, uptime monitoring, notifications, lead tracking, and audit runs.
- Restrict administrative access with source-IP allowlisting and token authentication; track security events through a CSP report pipeline.
- Run a documented change process for production work: tracked tasks with named file ownership, a required type-check gate before any change closes, and CI deployment on merge.

Local Outreach Automation
Python

- Built a pipeline that scrapes, scores, and qualifies local business records into a structured ledger, with CSV/XLSX export.
- Designed the ingest endpoint with input validation, schema versioning, rate limiting, and duplicate rejection, requiring explicit user confirmation before any transmission.

Reddit Devvit Application
React · Hono · TypeScript

- Built an application on Reddit's Devvit developer platform using React for the interface and Hono for backend services.
